“Fertility Pocket” Planting

Please follow these steps when planting seeds at Warm Heart:

- Dig a hole that is at least as wide and as long and as deep as your hoe blade.

- Put one handful of biochar fertilizer at the bottom of the hole.

- Fill the hole with “super-dirt”.

- Plant the seed(s) in the “super-dirt.”

- Cover with a handful of the dirt from the hole.

- Spread a handful of biochar around and over the hole.

- Cover the hole and approximately a full span of your hand in all directions with mulch or – if there is no mulch – rice straw.

- Water – a lot.
